

Fire/EMS Department

AGENCY OVERVIEW

Agency Description

The Fire/Emergency Medical Services (EMS) Department is responsible for fire suppression, emergency medical services, fire prevention, research and training and the coordination of the Volunteer Fire Companies. The Fire/EMS Department was established by Section 13 of the Schedule of Legislation for the Prince George's County Charter. The Fire Chief is responsible for its operation.

The Fire/EMS Department consists of a combination of sworn and civilian staff, in addition to more than 1,200 active volunteers, united under the operational authority of the County Fire Chief. Together these two labor forces combine to operate 45 fire and EMS stations, as well as several Fire/EMS Department support facilities that are located throughout the County. Each Volunteer Fire/Rescue Corporation operates at least one station. The Fire/EMS Department is organized into four operational commands: Emergency Services, Administrative Services, Support Services and Volunteer Services.

Facilities

The Fire/EMS Department's headquarters is located at the Largo Government Center (LGC) in Largo, Maryland. Staff is also located at several other County locations, including buildings in Forestville, Largo and Landover Hills. Training personnel are located at the Fire/EMS Training Academy in Cheltenham, although training classes are provided at various locations throughout the County. Currently, the Fire/EMS Training Academy is utilizing an administration building with classrooms for adjunct instructors to provide course curriculum for staff training. The Department operates 45 fire and EMS stations throughout the County.

Needs Assessment

The Office of Central Services – Facilities Operation and Management (FOM) Division has provided a complete assessment of the mechanical systems and the condition of the roofs of all stations. Based on that assessment the replacement of these mechanical systems has been prioritized and the most critical are included in the Fire

Station Renovations project. Also, based on the roof assessment and a review of the existing roof warranties, a roof replacement schedule has been developed, which will enable replacements to eventually become proactive, as opposed to reactive to water infiltration and damage. Funding for these improvements are included in the Fire Station Roof Renovations project.

Five stations have been identified as requiring extensive renovation to meet existing and projected service needs. Nine stations have been identified as requiring replacement, due to age, inadequate space and facilities, which makes renovation or rehabilitation cost ineffective. Some of these stations will be strategically relocated or consolidated to accommodate commercial and residential growth, which will improve our ability to meet our response time goals. In addition, four additional stations are planned to meet future service demand while improving our ability to meet our response time goals. All new stations and renovations will include station alerting systems designed to reduce stress on personnel and reduce response times, separate male/female sleeping facilities and will comply with the American Disability Act (ADA).

FY 2022 Funding Source

- General Obligation Bonds – 14.1%
- Other – 85.9%

FY 2022-2027 Program Highlights

- Fire Station Renovations – construction for renovations and mechanical, electrical, and plumbing and system upgrades will continue at Allentown, Accokeek, Bowie, Oxon Hill, Chillum #834, Glen Dale and Kentland.
- Fire Station Roof – construction for renovations will continue.
- Construction for the new Hyattsville Fire/EMS Station will continue.
- Planning for the new Oxon Hill Fire/EMS Station will continue and construction will begin.

- The Public Safety Pier will continue with construction.
- Construction for the new Shady Glen Fire/EMS Station will continue.
- Water Storage Tanks - construction will continue.
- West Lanham Hill Fire/EMS Station planning for renovations will continue.

NUMBER OF PROJECTS = 39							

Description: This project provides funding to complete a major renovation of the existing facility constructed in 1950. This facility currently house a basic life support ambulance, engine, ladder truck and brush unit.

Justification: Numerous stations were designed and constructed prior to current operational performance needs. Issues such as aging electrical and mechanical systems plague the station with significant ongoing expenses for maintenance. This station is unable to adequately serve staffing goals, male/female staffing accommodations and ADA compliance. Additional improvements such as energy efficiency improvements, security improvements, disaster resilience and technologies to improve response time will be included.

Highlights: No significant highlights for this project.

Enabling Legislation: CB-45-2020

Description: The new facility would consist of a 20,000 square foot building that would include a bay area to accommodate fire apparatus repairs, a breathing air maintenance repair shop, parts storage and administrative offices. The ideal location would be centrally located in the County and provide a secure and adequate area to park numerous apparatus outside in various states of repair.

Justification: The existing facility is leased on an annual basis and does not provide sufficient space to fulfill the mission.

Highlights: No significant highlights for this project.

Description: This project provides funding for a new station in the general area of Aquasco Road and Doctor Bowen Road. This station is identified in the M-NCPPC Public Safety Facilities Maser Plan as a long term priority.

Justification: The design will be a three-bay drive through design to address the current and future needs of the Fire/EMS Department. The station will incorporate traffic signalization, state-of-the-art fire station alerting, a health and wellness area and will have an outdoor training facility. The design will also incorporate LEED certified technologies, green energy initiatives and any required art in public places.

Highlights: No significant highlights for this project.

Description: This project provides funding for a new three-bay Fire/EMS Station, which will house an engine, an ambulance and a future special service. The facility will include a station alerting system designed to reduce response times, an exercise room, separate male and female sleeping/locker rooms, office space, an emergency generator and a training room.

Justification: This station will improve Fire/EMS response times along the Route 301 corridor between Bowie and Upper Marlboro, which are currently at unacceptable levels. The new station is consistent with the approved (March 2008) Public Safety Facilities Master Plan (M-NCCPC) and is listed as a high priority.

Highlights: No significant highlights for this project.

Description: This project consists of replacing the existing station with a new four-bay Fire/EMS station, which will house two engines, an aerial truck, a brush unit, a BLS ambulance, and a Battalion Chief. The station will include a station alerting system designed to reduce response times, an exercise room, separate male and female sleeping/locker rooms, office space, an emergency generator and a training room.

Justification: This project will replace the existing station that was built in 1950. The current facility provides inadequate space for modern apparatus and leaves little margin for error when vehicles are entering and leaving the facility. The new station is consistent with the approved Public Safety Facilities Master Plan and is listed as a intermediate priority.

Highlights: No significant highlights for this project.

Description: This project provides funding to complete a major renovation of the existing facility constructed in 1957. This facility currently houses a basic life support ambulance, engine, ladder truck and tanker.

Justification: Numerous stations were designed and constructed prior to current operational performance needs, issues such as significant site issues, aging electrical and mechanical systems plague the station with ongoing expenses to maintain service. This station is unable to adequately serve staffing goals, male/female accommodations and ADA compliance. Additional improvements such as energy efficiency improvements, security improvements, disaster resilience and technologies to improve response time will be included.

Highlights: No significant highlights for this project.

Enabling Legislation: Not Applicable

Description: This project provides funding for a station relocation in the general area of the Capital Beltway and Baltimore Avenue. The existing facility does not meet current and future needs of the Fire/EMS Department and renovation options to maintain the facility in its current location are extremely limited. The proximity of the current facility to other Fire/EMS facilities makes its location sub-optimal for Fire/EMS Department staffing needs.

Justification: The design will be three-bay drive through design to address current and future needs of the Fire/EMS Department. The station will incorporate traffic signalization, state of the art fire station alerting, a health and wellness area and an outdoor training facility. The design will also incorporate LEED certified technologies, green energy initiatives and any required art in public places.

Highlights: No significant highlights for this project.

Description: The fire station project will provide funding to construct a new fire station in the Camp Springs area.

Justification: The design will be a three-bay drive through to address the current and future needs of the Fire/EMS Department. The station will incorporate traffic signalization, state-of-the-art fire station alerting, a health and wellness area and will have an outdoor training facility. The design will also incorporate LEED certified technologies, green energy initiatives and any required art in public places. Given projected development and congestion in the area, this fire station will reduce response times.

Highlights: No significant highlights for this project.

Description: This project provides funding for the construction of a new office and assembly facility to contain all Fire/EMS Department leadership and management functions. The project will be located on land previously acquired in Westphalia on Presidential Parkway.

Justification: The design of the facility will consider the needs for the Fire Commission and the Prince George's County Volunteer Fire and Rescue Association. The design will also incorporate LEED certified technologies, green energy initiatives and any required art in public places.

Highlights: This project could consolidate several current Fire/EMS Department facilities into one single facility.

Description: This project provides funding for rehabilitating the existing office and training areas at the Cranford/Graves Fire Services Building.

Justification: The current facility is an old elementary school that has been converted into office and training areas. The office configurations, sizes and/or layouts are not conducive to the current office functions housed within the building. Improved security of the building site are necessary to protect employee and departmental property. In addition, a storage building will be necessary to store ambulances in a climate controlled environment.

Highlights: No significant changes for this project.

Description: This project provides funding for designing and replacement electrical, mechanical, structural and plumbing systems at numerous Fire/EMS stations throughout the County. The 45 stations vary in age and require ongoing maintenance in order to provide continued service to their communities.

Justification: Based on a consultant's study and an assessment provided by the Office of Central Services, numerous Fire/EMS stations have electrical, mechanical, structural and plumbing systems, which no longer meet building code requirements and are subject to failure at any time. Many of these systems require a redesign prior to replacement in order to ensure continued service. Some structural deficiencies were noted that are in need of redesign, but are not of the magnitude to warrant a separate project to accomplish.

Highlights: Funding will support renovations at Allentown, Accokeek, Bowie, Oxon Hill, Chillum #834, Glen Dale, and Kentland Fire Stations. In FY 2022, 'Other' funding is Public Safety Surcharge.

Description: This project provides funding for designing and constructing replacement roofs on numerous fire stations.

Justification: Numerous fire stations have aged roofs that are leaking and causing structural weakening. These roofs require periodic replacement and, in many cases, are in need of redesign to ensure a longer life span of the structure. The Office of Central Services conducted a complete assessment of the existing roofs and their respective warranties. Based on that assessment, a roof replacement schedule was developed which prioritizes roof replacements for all Fire/EMS stations. This scheduled plan will eventually allow for the replacement of a roof before it begins to leak.

Highlights: Prior year funding supports the completion of repairs to Berwyn Heights (Station 814) and Chillum (Station 844).

Enabling Legislation: CB-32-2018

Description: This project consists of replacing the existing station with a new three-bay Fire/EMS station, which will house two engines, a water tanker, a brush unit and an ambulance. The station will include a station alerting system designed to reduce response times, separate male and female sleeping/locker rooms, office space and a training room.

Justification: This project will replace the existing station that was built in 1956. The current fire station will be adversely impacted by projected changes to the Route 4/Westphalia Road overpass planned by the Maryland Department of Transportation. The new station is consistent with the approved Public Safety Facilities Master Plan and is listed as an intermediate priority.

Highlights: No significant highlights for this project.

Description: This project consists of replacing the existing station with a new three-bay Fire/EMS station, which will house tow engines, a BLS ambulance and a brush truck. The new location will be in the vicinity of Greenbelt Road and South Way.

Justification: The future relocation of the existing station to Greenbelt Road, between Lakecrest Drive and the Baltimore Washington Parkway, or on South Way between Greenbelt Road and South Way Court, would have a positive effect on fire emergency service delivery to the City of Greenbelt and surrounding communities. The new station, which is consistent with the approved Public Safety Facilities Master Plan and is listed as an intermediate priority.

Highlights: No significant highlights for this project.

Description: This project consists of replacing the existing station with a new four-bay Fire/EMS station, which will house two engines, a BLS ambulance, a ladder truck and a rescue squad. The station will include a station alert system designed to reduce response times, an exercise room, separate male and female sleeping/locker rooms, office space, an emergency generator and a training room.

Justification: This project will replace the existing station that was built in 1959. The new station is consistent with the approved (March 2008) Public Safety Facilities Master Plan (M-NCPPC) and is listed as an intermediate priority. The station will include office space for the American Red Cross. The American Red Cross is providing the adjoining property to build the new station.

Highlights: The project is currently pushed out one year pending approval to proceed and a land agreement with the American Red Cross. 'Other' revenue in FY 2021 and FY 2022 is from Public Safety Surcharge.

Description: This funding provides for the rehabilitation of the existing station as recommended in the approved Public Safety Facilities Master Plan. The existing station houses two engines, a rescue engine, a tower ladder, a mini-pumper and an ambulance.

Justification: The existing station was built in 1958 and was not designed to accommodate male and female personnel and does not meet Americans with Disabilities Act requirements. Mechanical and electrical systems are nearing the end of their useful life. This rehabilitation is consistent with the approved Public Safety Facilities Master Plan and is listed as a long term priority.

Highlights: No significant highlights for this project.

Description: This project provides funding to complete a major renovation of the existing facility constructed in 1970. This facility currently houses a basic life support ambulance, advanced life support ambulance and paramedic engine.

Justification: Numerous stations were designed and constructed prior to current operation and performance needs. Issues such as failing exterior façade and aging electrical and mechanical systems plague the station with significant ongoing expenses to maintain service. This station is unable to adequately serve staffing goals, male/female staffing accommodations and ADA compliance. Additional improvements such as energy efficiency improvements, security improvements, disaster resilience, and technologies to improve response time will be included.

Highlights: No significant highlights for this project.

Description: This project consists of replacing the existing station with a new four-bay Fire/EMS Station, which will house two engines, three BLS ambulances, a medic unit and a rescue squad. The station will include a station alert system designed to reduce response times, an exercise room, separate male and female sleeping/locker rooms, office space, an emergency generator and a training room.

Justification: The current rescue squad facility and annex are inadequate in size and lack maneuverable space to meet current service requirements. Although the existing facility has been temporarily modified, it only provides limited functional capabilities. The new station is consistent with the approved Public Safety Facilities Master Plan and is listed as a high priority.

Highlights: No significant highlights for this project.

Description: This project provides funding to complete a major renovation of the existing facility constructed in 1970. This facility currently houses an advanced life support ambulance, engine and tanker.

Justification: This facility is described in the M-NCPPC Public Safety Master Plan as an intermediate priority. Numerous stations were designed and constructed prior to current operational performance needs. Issues such as aging electrical and mechanical systems plague the system with significant expenses to maintain service. This station is a critical element to improving recent ISO ratings of the Fire/EMS Department, which identified gaps in fire protection and water supply in the rural tier. The station is unable to adequately service staffing goals, male/female staffing accommodations, and ADA compliance. Additional improvements such as energy efficiency improvements, security improvements, disaster resilience, and technologies to improve response time will be included.

Description: The project consists of replacing the existing station with a new four-bay Fire/EMS station, which will house two engines, a BLS or ALS ambulance, a ladder truck and a rescue squad. The facility will include a station alerting system designed to reduce response times, an exercise room, separate male and female sleeping/locker rooms, office space, an emergency generator and a training room.

Justification: The current fire station facility and its complement of equipment and personnel are contained in a structure that is inadequate to meet projected service requirements. The project will entail a relocation of current equipment and personnel to a more centralized and enhanced facility.

Highlights: No significant highlights for this project.

Enabling Legislation: CB-44-2014

Description: This project provides funding to construct a new fire station that will be a three-bay design able to accommodate an ambulance, engine and tanker. Station construction will include technologies to improve alerting and response times, as well as energy efficiency improvements.

Justification: This facility is described in the M-NCPPC Public Safety Facility Master Plan as a long term priority. The station's site is in an area that is unable to be served within prescribed response time performance goals. This project is a critical element to improving recent ISO ratings of the Fire/EMS Department, which identified gaps in fire protection and water supply in the rural tier.

Highlights: No significant highlights for this project.

Description: The project consists of replacing the existing station with a new four-bay Fire/EMS station, which will house two engines, an ambulance, an aerial truck and a Battalion Chief. The facility will include a station alerting system designed to reduce response times, an exercise room, separate male and female sleeping/locker rooms, office space and a training room. The Police Department could co-locate with the Fire Department in the future.

Justification: The project will replace the existing station that was built in 1952 and requires constant maintenance to keep the mechanical and electrical systems operational. The new location's proximity to major highways will improve overall response times to Oxon Hill and the surrounding communities, specifically the National Harbor and Fort Foote Road area.

Highlights: This project is currently in the design phase and initial concepts and site plans are under review. The project has been delayed during this review period as well as to address debt affordability concerns. FY 2022 'Other' funding is use of 2021A bond premium.

Enabling Legislation: CB-32-2018

Description: This project provides funding for a new four-bay Fire/EMS station, which will house an engine and ambulance and a future special service. The facility will include a station alerting system designed to reduce response times, an exercise room, separate male and female sleeping/locker rooms, office space, emergency generator and a training room.

Justification: Development in the southern portion of the County will generate expanded service needs due to residential and commercial growth. Additional fire and emergency medical services will be needed for the resident and business establishments in this section of the County. The new station is consistent with the approved Public Safety Facilities Master Plan as is listed as a long term priority.

Highlights: No significant highlights for this project.

Description: This project consists of the creation of a six berth pier on which boats can be stored to be used by the Fire/EMS Department, Maryland-National Capital Park and Planning Police, Maryland Department of Natural Resources Police and the Prince George's County Police Department.

Justification: The Public Safety Pier will provide a platform from which law enforcement, fire suppression and water rescue operations can commence in a timely fashion thus reducing response times to the National Harbor, the Woodrow Wilson Bridge and surrounding areas.

Highlights: The pier will have four boat lifts and is projected to be completed in FY 2021.

Description: The design will be a four-bay drive through design to address current and future needs of the Fire/EMS Department. The station will incorporate traffic signalization, state of the art fire station alerting system, a health and wellness area and will have an outdoor training facility. This project provides funding for a fire station relocation in the area of Ritchie Marlboro Road and Sansbury Road.

Justification: The existing facility does not meet current and future needs of the Fire/EMS Department and renovation options to maintain the facility in its current location are extremely limited. The new location will also provide improved coverage to the proposed Westphalia development, while coverage is maintained with the addition of the Shady Glen Fire Station.

Highlights: No significant highlights for this project.

Description: This project provides funding to construct a new fire station that will allow the consolidation of two existing stations. The proposed new station will be a four-bay design able to accommodate two ambulances, an engine and a ladder truck. This location is ideal to serve the surrounding communities currently served by both stations. Station construction will include technologies to improve alerting and response time, as well as energy efficiency improvements.

Justification: This facility will replace two facilities that were constructed in 1937 and 1956 respectfully. These stations are plagued with aging infrastructure and poor operational placement to serve the greater community. The efficiency realized by the consolidation of the stations will reduce the overall operational cost as well as improve service delivery and response times.

Highlights: No significant highlights for this project.

Description: This project consists of constructing a new four-bay Fire /EMS station, which will house an engine, ambulance and ladder truck. The facility will include a station alerting system designed to reduce response times, an exercise room, separate male and female sleeping/locker area, office space, an emergency generator and a training room. A pre-fabricated metal building will be constructed in the rear of the station which will house the Candidate Physical Ability Test (CPAT) course for testing entry-level firefighter applicants.

Justification: This station will improve Fire/EMS response times along the Central Avenue corridor, which are currently at poor levels. The new station is consistent with the approved (March 2008) Public Safety Master Plan (M-NCPPC) and is listed as a highest priority.

Highlights: 'Equipment' expenditures include funding for signalization to facilitate safe ingress and egress from the station and a training tower. Included in 'Other' expenditures is at least 1% of the construction costs for art in public places. Total project cost increased due to escalation of costs for construction. FY 2021 'Other' funding is Public Safety Surcharge.

Description: The design will be a three-bay drive through design to address current and future needs of the Fire/EMS Department. The station will incorporate traffic signalization, state-of-the-art fire station alerting, a health and wellness area and will have an outdoor training facility.

Justification: This project provides funding for a new station in the general area of the Laurel Bowie Road and Snowden Road. This station is identified in the M-NCPPC Public Safety Facilities Master Plan as a long term priority.

Highlights: No significant highlights for this project.

Enabling Legislation: Not Applicable

Description: This project provides funding for a new three-bay Fire/EMS station, which will house an engine, ambulance and a special service. The facility will include a station alerting system designed to reduce response times, an exercise room, separate male and female sleeping/locker room, office space, emergency generator and a training room.

Justification: The new station will improve Fire/EMS response times in the Oxon Hill, Silver Hill, Camp Springs and Temple Hills areas. The new station is consistent with the approved Public Safety Facilities Master Plan and is listed as an intermediate priority.

Highlights: No significant highlights for this project.

Enabling Legislation: CB-32-2018

Description: This project provides funding for installing 30,000 gallon underground storage tanks and the installation of dry fire hydrants in rural areas, not served by the Washington Suburban Sanitary Commission or other municipal water supply systems.

Justification: Many areas of the County do not have an adequate fire fighting water supply. The installation of the tanks and dry hydrants will improve fire suppression services to those areas and will assist in lowering insurance rates for property owners of the area.

Highlights: In FY 2022, funding was pushed out to address debt affordability concerns. Prior year appropriation will be used to complete previously planned water tank construction.

Enabling Legislation: CB-44-2016

Description: This project provides funding for renovating the existing station. Fire and emergency medical services to the Lanham, Seabrook and New Carrollton areas. It houses three pumpers, two ambulances, a foam unit and brush truck.

Justification: The existing station was built in 1948 and was not designed to accommodate male and female members and does not meet Americans with Disabilities Act requirements.

Highlights: Project has been delayed; working on agreement for renovation plans with volunteer leadership.

Enabling Legislation: CB-53-2010
